SUMMARY

Software developer with a strong engineering foundation and hands-on experience in Python, cloud-native application delivery, CI/CD automation, and generative AI tooling. Practiced in applying large language models including Claude, OpenAI, and LangChain to accelerate development workflows. AWS Certified Developer with a track record of delivering production-grade applications in collaborative, cross-functional environments.

CERTIFICATIONS & SKILLS

Certifications: AWS Certified Developer Associate (2024-2027)

GenAI & AI/ML: Claude (Anthropic API), OpenAI API, LangChain, Prompt Engineering, PyTorch, Agentic Workflows, Vector Databases

Languages & Frameworks: Python, JavaScript, TypeScript, Ruby on Rails, React, Astro, SQL

Cloud & DevOps: AWS (EC2, RDS, S3), GitHub Actions, CI/CD, Docker, Fly.io

Tools & Practices: GitHub, Supabase, PostgreSQL, Drizzle ORM, Agile/Scrum, Code Review, TDD

EDUCATION

DePaul University 2022

Bachelor of Science in Software Development | GPA: 3.3/4.0 | Dean's List 2022

Linköping University 2021

Bachelor of Business Administration

PROFESSIONAL EXPERIENCE

Bensenville, IL (Bensenville, IL) November 2024 – Present

Logistics Coordinator

- Designed and built Python automation pipelines to ingest, clean, and process large operational datasets, reducing manual processing time and minimizing human error across production workflows
- Developed custom data extraction and parsing programs applying structured validation logic and business rules to transform raw shipment records into analytics-ready formats
- Applied iterative, outcome-driven development practices to continuously improve automation scripts, identifying bottlenecks and implementing targeted enhancements to increase throughput
- Leveraged advanced Excel functions and macros alongside Python tooling to maintain accurate, high-integrity shipment records supporting operational decision-making

Remote (Remote) June 2024 – November 2024

Front-End Software Developer Intern

- Developed and maintained a cloud-hosted production web application built with Astro and React, serving 10,000-plus monthly users with high availability and responsive performance
- Implemented responsive, accessible UI components using TypeScript and Tailwind CSS, integrating with backend services via REST APIs and Supabase on a PostgreSQL data layer
- Collaborated cross-functionally with backend and DevOps teammates to ensure reliable end-to-end delivery, applying version control best practices and participating in regular code reviews
- Contributed to iterative feature delivery in an agile environment, balancing speed of deployment with code quality and maintainability across a distributed team

Remote (Remote) March 2023 – July 2023

Ruby Full Stack Software Developer

- Designed and implemented CI/CD pipelines from scratch using GitHub Actions, automating build, test, and deployment workflows to enable continuous, reliable delivery across multiple repositories
- Built a full-stack blogging application using Ruby on Rails and React with RESTful API communication via Axios, deployed on AWS with an RDS-backed PostgreSQL database
- Applied DevSecOps and Extreme Programming practices including test-driven development, pair programming, and continuous integration to maintain high code quality throughout the SDLC
- Facilitated JSON-based data exchange between frontend and backend layers, designing clean API contracts and ensuring predictable, well-documented data flows

PROJECTS

GenAI Development Practice

- Daily practitioner of generative AI tools across the full Claude model lifecycle, applying the Anthropic API, prompt engineering techniques, and LangChain for agentic workflow development and code generation; built practical intuition for model behavior, context management, and evaluating where GenAI adds genuine product value

Revature Blogger

- Full-stack blogging platform built for Revature enabling users to create accounts and share content publicly. Led DevOps responsibilities including designing GitHub Actions CI/CD pipelines for automated build and test on every commit. Stack: Ruby on Rails, React, REST API, PostgreSQL, AWS, GitHub Actions

Airline Shortest Path

- Python graph algorithm project simulating airline terminal networks. Generates weighted node graphs and applies Dijkstra's algorithm to determine optimal routing between terminals. Demonstrates applied data structures, algorithmic thinking, and Python proficiency

Mario Screaming Bot

- JavaScript Discord bot with token authentication, hosted autonomously on Replit with UptimeRobot uptime monitoring. Supports voice channel audio playback and text transformation functions
